

This machine is designed to sort oysters and other shellfish in their natural setting.

FEATURES

- Oysters and other shellfish are sorted through different layered gratings using an eccentric mechanism.

TECHNICAL FEATURES

- Power supply: 380 V + neutral + earth
- Power: 2 kW
- Equipped with an electronic speed control for the movement of the gratings

OPERATION

- Oysters and other shellfish are sorted through different layered gratings using an eccentric mechanism.
- The sorting process is silent.
- The sorted oysters are released onto an inspection belt or directly into chutes to be transferred into pouches/baskets/bags.
- Featuring 2/3 or 4 gratings, which can be easily interchanged from above.
- Washing tunnel for a final rinse (optional).

OUTPUT

- Varies according to the type of oyster (spat or ready to sell), and the desired quality in terms of sorting.

SIZE

- As standard
- Length: 3800 mm
- Width: 1200 mm

MAINTENANCE

- The machine is robust and made entirely from stainless steel.
- Capacity: ≈ 2 m³ of water
