

Modular inclined conveyors or inclined conveyor belts can be used to feed any type of machine.

FEATURES

- A modular conveyor or conveyor belt to feed shellfish into any machine.

TECHNICAL FEATURES

- Electric or hydraulic geared motor
 - Speed control
 - Adjustable feet

OPERATION

- Equipped with a cleated conveyor belt or modular elements, the length of which are determined by the height of the machine it feeds.
- Driven by a hollow-shaft geared motor and typically fitted with an electronic speed control.
- The hopper is custom-made to suit the installation and the client's needs (square or triangular with a variable volume to increase or decrease the storage capacity).

OUTPUT

- Variable according to the client's needs and the machine that it feeds

SIZE

- Length: up to 15 m (find out more)
- Width: up to 3 m (find out more)
- Other dimensions available on demand

MAINTENANCE

- The machine is robust and made entirely from stainless steel.
- The belts are connected by stainless steel staples.
- The modular system allows for rapid replacements in the event of any wear.
